SUPERSTORE SALES & PROFIT DASHBOARD

Executive Summary Report

Prepared by: Hudu Yusuf Ibrahim

Programme: AnalystLab Africa — Data Analytics Internship

Project: Week 2 — Business Analytics Case Study

Tool: Microsoft Power BI

Date: August 2026

Executive Summary

This report presents key findings from the Superstore Sales & Profit Dashboard, built to help management monitor sales performance, profitability, customer behavior, and regional performance. The analysis shows a business with steady overall sales growth, led by a strong-performing Technology category and a West region that consistently outperforms the rest of the country. However, the dashboard also surfaces two clear concerns: Furniture generates substantial revenue but very low profit, and sales are heavily concentrated in the Consumer segment. The insights, risks, opportunities, and recommendations below are intended to help management prioritize where to invest, where to intervene, and where to grow.

Key Business Insights

Insight 1 — West is the strongest sales region

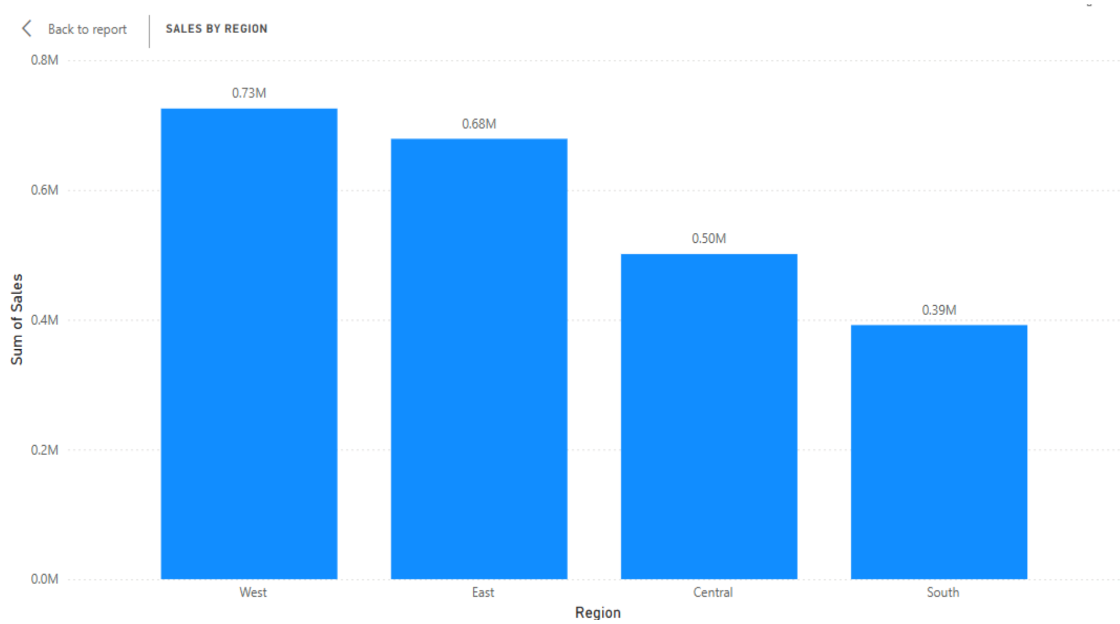
Finding

The West region generated approximately $0.73M in sales, making it the highest-performing region, while the South generated approximately $0.39M.

Business Interpretation

The West is currently the company's strongest regional market. Management could examine the factors contributing to its success and determine whether similar strategies could be applied elsewhere.

Evidence from Dashboard



Insight 2 — Technology is the strongest-performing category

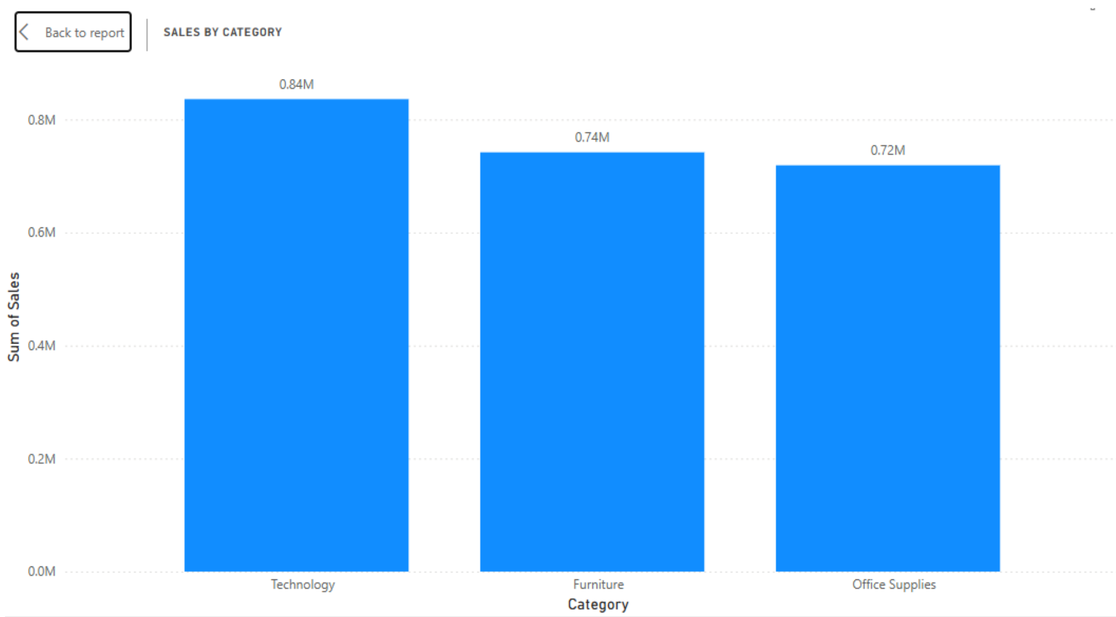
Finding

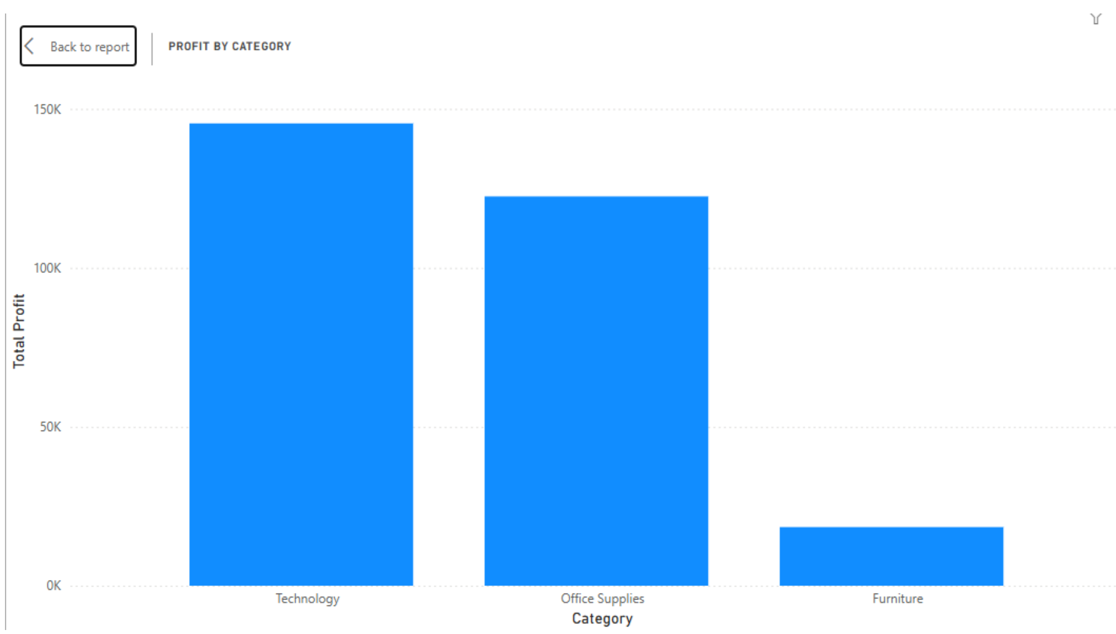
Technology generated approximately $0.84M in sales, making it the highest-selling category. It also generated approximately $145K in profit, with a profit margin of approximately 17% — compared with only about 2% for Furniture.

Business Interpretation

Technology is currently the strongest category because it combines high sales with strong profitability, making it the company's most valuable product line on both revenue and margin.

Evidence from Dashboard





Insight 3 — Furniture generates substantial sales but very little profit

Finding

Furniture generated approximately $0.74M in sales, close to Technology's $0.84M. However, its profit was only approximately $18K, with a profit margin of about 2%. Within Furniture, the Tables sub-category is actually losing money (-$17,725, a -9% margin).

Business Interpretation

Furniture is generating revenue but converting relatively little of it into profit. This suggests management should examine pricing, discounts, product costs, and individual furniture products — starting with Tables.

Evidence from Dashboard

Category	Total Sales	Total Profit	Profit Margin
Technology	**836,154.03**	**145,454.95**	**0.17**
Office Supplies	**719,047.03**	**122,490.80**	**0.17**
Furniture	**741,999.80**	**18,451.27**	**0.02**
Tables	206,965.53	-17,725.48	-0.09
Furnishings	91,705.16	13,059.14	0.14
Chairs	328,449.10	26,590.17	0.08
Bookcases	114,880.00	-3,472.56	-0.03
Total	**2,297,200.86**	**286,397.02**	**0.12**

Insight 4 — Consumer customers are the largest customer segment

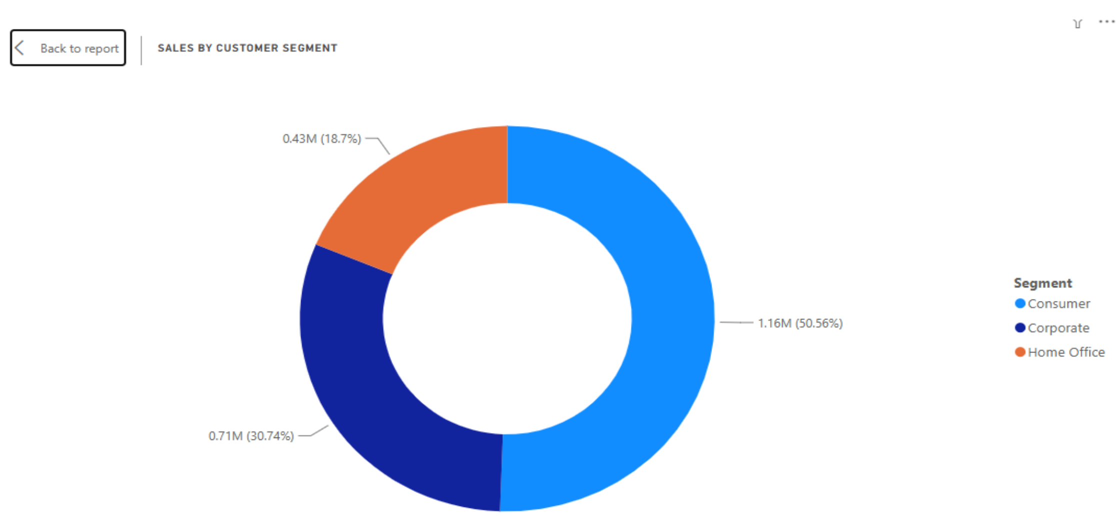
Finding

The Consumer segment generated approximately $1.16M, representing about 50.6% of total sales. Corporate customers generated approximately $0.71M, while Home Office generated approximately $0.43M.

Business Interpretation

Consumer customers are the company's largest revenue source, so maintaining customer satisfaction and retention in this segment is important for overall sales performance.

Evidence from Dashboard



Insight 5 — Sales are concentrated in a relatively small number of products

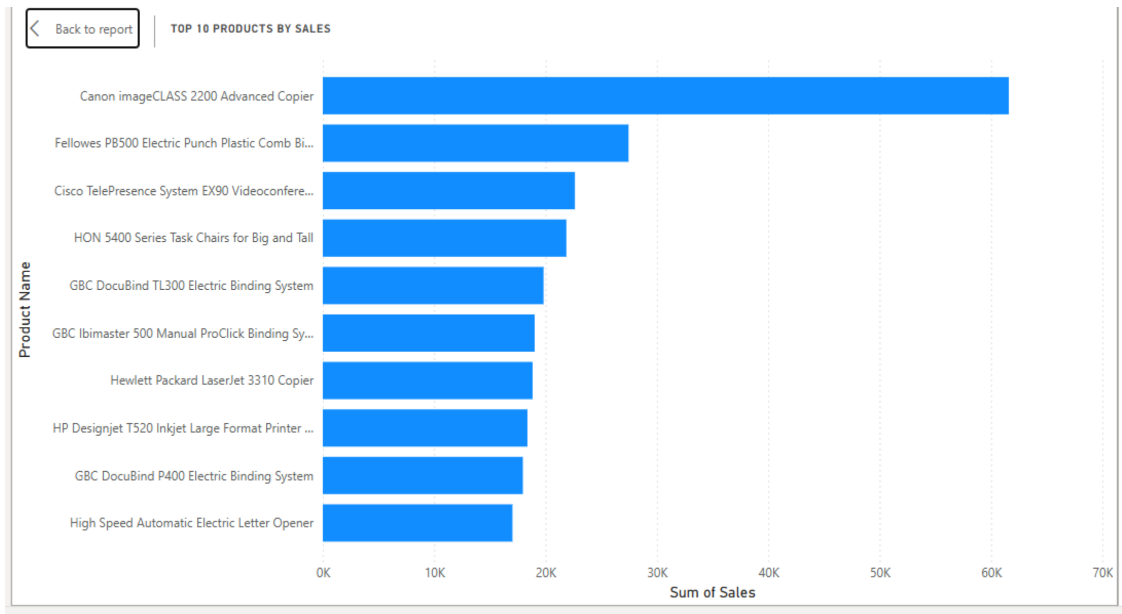
Finding

The Top 10 Products by Sales visual shows that some products generate substantially more sales than others. The leading product, the Canon imageCLASS 2200 Advanced Copier, has considerably higher sales than several of the other products in the Top 10.

Business Interpretation

Product performance is uneven, meaning management should identify the strongest products and understand what drives their success, while reviewing weaker products for possible improvement.

Evidence from Dashboard



Business Risks

Risk 1 — Heavy dependence on the Consumer segment

The Consumer segment accounts for approximately 50.6% of total sales ($1.16M). If demand from Consumer customers declines, the company could experience a significant reduction in overall revenue.

Evidence

Consumer sales ≈ $1.16M, 50.6% of total sales. (See Insight 4 — Sales by Customer Segment.)

Risk 2 — Low profitability in Furniture

Furniture produces approximately $0.74M in sales but only around $18K in profit, resulting in an approximately 2% profit margin. The company may be generating significant revenue from Furniture without generating sufficient profit; continued low-margin sales could reduce overall profitability.

Evidence

Furniture: ≈$741K sales, ≈$18K profit, ≈2% margin; Tables sub-category is loss-making at -9% margin. (See Insight 3 — Matrix table.)

Risk 3 — Uneven regional performance

Sales vary considerably across regions. The West generated approximately $0.73M, while the South generated only approximately $0.39M. The weaker performance in the South may indicate an underperforming market; if this continues, the company could miss potential revenue opportunities in that region.

Evidence

West ≈ $0.73M vs South ≈ $0.39M in sales. (See Insight 1 — Sales by Region.)

Business Opportunities

Opportunity 1 — Expand Technology performance

Technology generates approximately $0.84M in sales and $145K in profit, with an approximately 17% profit margin. There is an opportunity to grow this category further — through expanded product range, increased marketing investment, or promotional focus — since it already delivers the best return of any category.

Evidence

Sales by Category and Profit by Category visuals. (See Insight 2.)

Opportunity 2 — Improve Furniture profitability

Furniture already generates approximately $0.74M in sales, so even a relatively small improvement in its margin could increase overall profit.

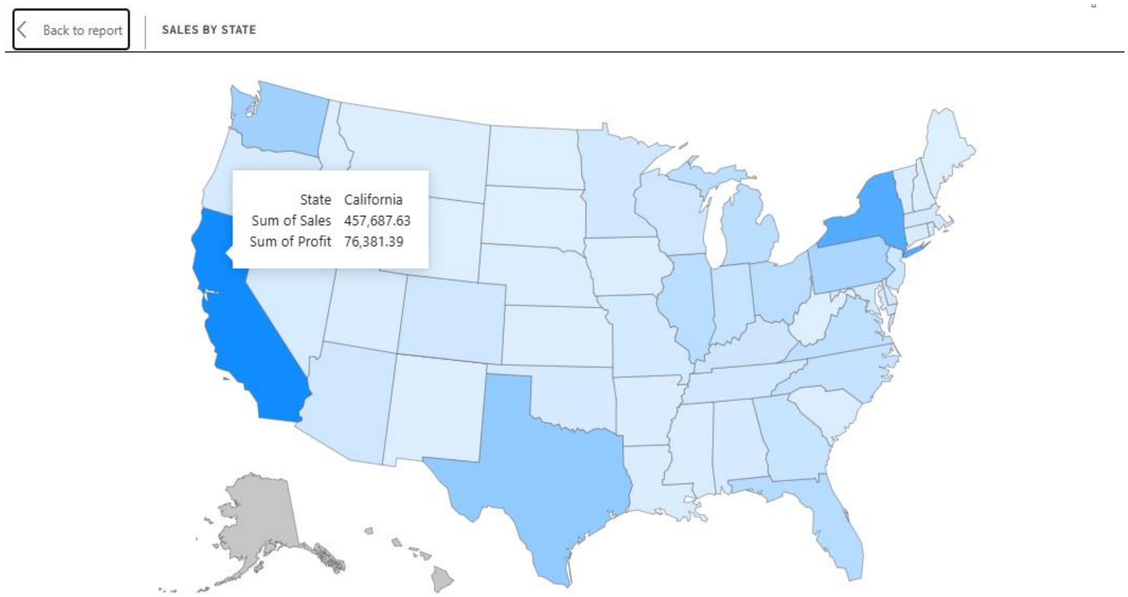
Evidence

Furniture ≈ $741K sales / $18K profit / ≈2% margin. (See Insight 3 — Matrix table.)

Opportunity 3 — Investigate the South market

The South generates approximately $0.39M, the lowest regional sales figure. This gap represents an opportunity to grow revenue by investigating what's limiting performance in the South (marketing reach, store presence, product availability) and applying lessons from the West's success.

Evidence



Recommendations

Based on the findings from the Superstore Sales & Profit Dashboard, the following recommendations are proposed to improve profitability, strengthen sales performance, and support sustainable business growth.

Recommendation 1 — Increase investment in the Technology category

Management should prioritize high-performing Technology products through targeted marketing, adequate inventory levels, and continued product availability.

Supporting Insight

Technology generated approximately \$0.84M in sales and \$145K in profit, with a profit margin of approximately 17% — making it the strongest-performing category.

Expected Impact

Increased focus on profitable Technology products could help the company maintain strong revenue and profitability.

Recommendation 2 — Review pricing and discount strategies for Furniture

Management should review Furniture pricing, discounts, and product costs to identify ways to improve profitability without significantly reducing sales.

Supporting Insight

Furniture generated approximately \$0.74M in sales but only about \$18K in profit, resulting in a profit margin of approximately 2%.

Expected Impact

Improving Furniture margins could significantly increase overall profit because the category already generates substantial sales.

Recommendation 3 — Develop a strategy to improve South region performance

Management should investigate the reasons for lower sales in the South and consider targeted marketing campaigns, product availability improvements, and customer-focused promotions.

Supporting Insight

The South generated approximately $0.39M in sales, compared with approximately $0.73M in the West, the strongest region.

Expected Impact

Improving the South's performance could help reduce regional sales disparities and create additional revenue.

Recommendation 4 — Strengthen customer retention in the Consumer segment

Management should prioritize customer retention and engagement strategies for Consumer customers while also developing opportunities to grow Corporate and Home Office segments.

Supporting Insight

Consumer customers generated approximately $1.16M, representing about 50.6% of total sales.

Expected Impact

Protecting the company's largest revenue segment can help maintain overall sales while diversification reduces dependence on one segment.

Recommendation 5 — Optimize the product portfolio

Management should regularly review product-level sales and profitability to identify high-performing products for greater investment and weaker products for pricing, marketing, or inventory review.

Supporting Insight

The Top 10 Products by Sales dashboard shows that product performance is uneven, with some products generating substantially more sales than others.

Expected Impact

Focusing resources on products with strong demand and profitability can improve inventory efficiency and overall financial performance.

Conclusion

The analysis indicates that the business has strong opportunities to improve performance by investing in profitable categories, addressing low-margin products, strengthening weaker regions, and optimizing its customer and product portfolio. Management should prioritize actions based on both sales performance and profitability rather than focusing on revenue alone.
